

NINDS Biorepository

BioSpecimen Exchange for Neurological Disorders, BioSEND

Training Webinar

Presented by:
Scott Kaiser

Webinar Overview

1. Site Equipment

2. BioSEND

- Kit Contents and Ordering
- Sample Labelling
- Sample Collection and Processing
- Shipping Samples
- Quality Control

3. Contact Information

Study Reminders

Please remember...

- Biospecimens are limited valuable resources
- Standardization and quality are key! 
- Reference the BioSEND Manual of Procedures as needed
- Do not replace or supplement any kit components without first receiving approval from BioSEND

Equipment

The following items are to be supplied by the site:

- ▶ Personal protective equipment
- ▶ Alcohol prep pads
- ▶ Butterfly needles and hubs
- ▶ Tourniquet
- ▶ Gauze pads
- ▶ Bandages
- ▶ Sharps bin and lid
- ▶ Microcentrifuge tube rack
- ▶ Test tub rack
- ▶ Crushed ice
- ▶ Pipettes and pipette tips
 - 4°C Centrifuge
 - -80°C Freezer
 - Dry ice

BioSEND Kit Request Module: Type by Site

Example A

Kit Type * must provide value	<input type="checkbox"/> Baseline Visit Kit (w/DNA) <input type="checkbox"/> Supplemental Kit <input type="checkbox"/> Extra Supplies
---	---

Example B

Kit Type * must provide value	<input type="checkbox"/> Baseline Visit Kit (w/DNA) <input type="checkbox"/> Follow-up Visit Kit (wo/DNA) <input type="checkbox"/> CSF Kit <input type="checkbox"/> Supplemental Kit <input type="checkbox"/> Extra Supplies
---	--

- Each PDBP site uses slightly different kit components
- Kits differ based on baseline and longitudinal visits
 - Typical difference is the collection of a blood tube for DNA only at the baseline visit

BioSEND Kit Request Module: Kit Type

Kit Type

Each PDBP Baseline Collection Kit Contains:

- 3 - Monoject - Lavender-top EDTA tube (10 ml)
- 3 - Vacutainer - Red-top serum tube (10 ml)
- 2 - Vacutainer - Purple-top EDTA tubes (6 ml)
- 4 - Vacutainer - PAXgene tubes (2.5 ml)
- 36 - Siliconized cryovials, sterile (2ml)
- 1 - Cryobox
- 1 - Warning label packet (incl. dry ice label)
- 2 - Shipping instruction sheets
- 1 - FedEx Overpack
- 2 - FedEx return Airbills
- 1 - Shipping container for dry ice shipments
- 1 - Shipping kit for ambient shipments
- 2 - Biohazard bag
- 2 - 100 ml absorbent sheet
- 2 - 6-tube bubble pouch
- 30 - Cryohold pre-printed labels

Labels

Types of Labels

► Case Label

Identify Study and PI

► Specimen Label

Identify Individual
biospecimens

Case Label

ST-10000032:

← **Subject Number**

PDBP-WEST:

← **Study – PI**

BL

← **Visit**

BioSend

← **Biorepository Name**

Case Labels

Case labels are placed:

- On the plastic biohazard bag of the cryovial transport box
- On the plastic biohazard bag for the PAXgene™ tubes
- On the lid of the shipping canisters.
- *On lid of frozen shippers (pre-labeled)*

Collection and Aliquot Tube Label

Biospecimen Number

Study = BioSEND

Case Number

Subject Number

Specimen Type

Collection and Aliquot Tube Label

Collection and Aliquot Tube Labels are placed on:

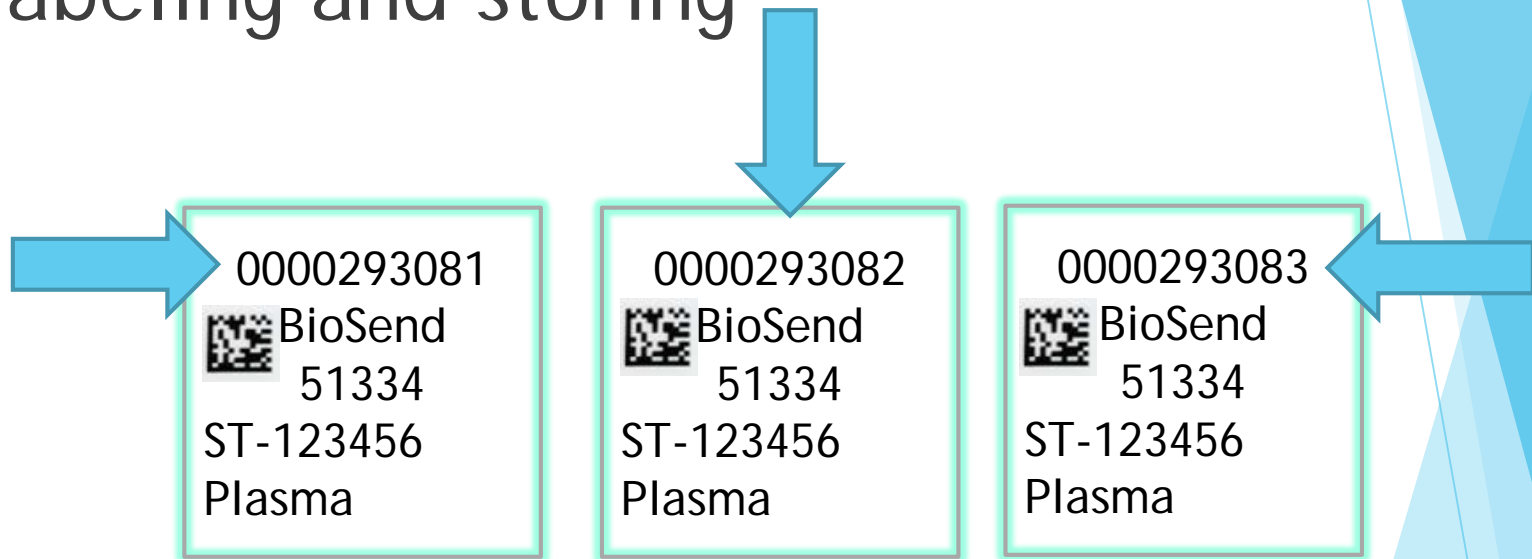

- All collection tubes
- All aliquot tubes (Cryovials)

Be sure that the tube has the correct specimen type on the label

Aliquot labels

- Keep samples in sequential order when labeling and storing

Sample Collection & Processing

Reminders:

- Collection of biospecimen blood samples should be from subjects who have been fasting for 8 hours or more. If fasting is not feasible, follow suggested low-fat diet.
- G force \neq RPM
- All specimens should be frozen and stored UPRIGHT
 - For RNA, whole blood, and urine specimens, please freeze samples upright in a non-styrofoam rack
 - For plasma, buffy coat, serum, and CSF aliquots, please freeze samples upright in the cryobox provided

Calculating Centrifugation Speed

<http://clinfield.com/2012/07/how-to-convert-centrifuge-rpm-to-rcf-or-g-force/>

The force exerted on a particle in a centrifuge is a simple function of the rotation speed of the centrifuge and the radius of rotation. The actual equation is:

$$\text{RCF or G-force} = 1.12 \times R \times (\text{RPM}/1000)^2$$

**R being the radius of rotation measured in millimeters*

$$(\text{RPM}/1000)^2 = 1500 / (1.12 \times 100\text{mm})$$

$$\sqrt{(\text{RPM}/1000)^2} = \sqrt{1500 / (1.12 \times 100\text{mm})}$$

$$\text{RPM}/1000 = \sqrt{1500 / 1.12 \times 100}$$

$$\text{RPM} = 1000 \times \sqrt{15/1.12}$$

$$= 3660$$

**Please refer to Appendix F in the BioSEND Biologics Manual for further information regarding the centrifugation of samples*

Calculating Centrifugation Speed

<https://www.eppendorf.com/CA-en/centrifuge-speed-calculator/>

Centrifuge Calculator

Rotational Speed and centrifugal force

To calculate the relative centrifugal force at the given rotor speed and given rotor radius, please enter the values in the appropriate fields and press the Calculate RCF key.

The Calculate Speed key provides information on the required rotational speed at the given relative centrifugal force and the given rotor radius.

Please specify centrifuge and rotor or enter rotor's radius directly

5810/5810 R

Rotors for 5810/5810 R

- 30-place fixed-angle rotor for 1.5-2.0 ml tubes (F-45-30-11)
- 30-place Aerosol-tight fixed-angle rotor for 1.5-2.0 ml tubes (FA-45-30-11)
- 6 x 85 ml High-speed fixed-angle rotor (F-34-6-38)

= Radius 10 cm

Relative centrifugal force (RCF)

RCF 1500 x g

Calculate Speed >>

<< Calculate RCF

Speed

Speed 3663 rpm

****The 3663 rpm speed was calculated using a hypothetical radius of 10 cm and a RCF of 1500 x g.***

Refer to Appendix F in the BioSEND Biologics Manual for further information regarding the centrifugation of samples

Order of Specimen Collection

1. Serum (red top) blood collection for serum (if applicable)
2. PAXgene™ tube for RNA
3. EDTA 6 ml (purple top) blood collection for DNA (usually only at baseline)
4. EDTA 10 ml (lavender top) blood collection for plasma
5. EDTA 6 ml (purple top) blood collection for whole blood

Serum Diagram

Serum Preparation (10 ml Red Top Tube)

Step One

- Store tubes at room temperature.
- Label tubes with pre-printed subject labels prior to blood draw.
- Label cryovial tubes with preprinted labels.
- Pre-chill cryovials on wet ice for 5 minutes or longer.

Step Two

- Collect blood in Serum Tube allowing blood to flow for 10 seconds and ensuring blood flow has stopped.

Step Three

- Immediately after blood draw, invert tubes 8-10 times to mix samples.

Step Four

- Allow blood to clot for 30 minutes.
- Within 60 minutes of blood draw, centrifuge samples at 1500 x g for 15 minutes at 4°C.

Step Five

- Aliquot 1.0 mL into each cryovial tube.
- Store serum aliquots at -80°C until shipment.
- Return 4-6 1.0 mL aliquots to BioSEND.

PAXgene diagram

PAXgene™ Preparation

Step One

- Store tubes at room temperature.
- Label tubes with pre-printed subject labels prior to blood draw.

Step Two

- Collect blood into *one* PAXgene Tube, allowing blood to flow for 10 seconds and ensuring blood flow has stopped.

Step Three

- Immediately after blood draw, invert tubes 8-10 times to mix samples.
- Repeat steps two and three for additional tubes.

Step Four

- Incubate tubes upright at room temperature for 24 hours before freezing samples.

Step Five

- After 24 hours incubation at room temperature, store tubes upright in a -80°C in a wire rack until shipment.

DNA

DNA Preparation (6 ml Lavender Top Tube)

Step One

- Store tube at room temperature.
- Label tube with pre-printed labels prior to blood draw.

Step Two

- Collect blood in tube, allowing blood to flow for 10 seconds and ensuring blood flow has stopped.

Step Three

- Immediately after blood draw, invert tubes three times to mix samples.

Step Four

- Hold the specimen at room temperature until shipment BioSend.

Plasma

Plasma Preparation (10 ml Lavender Top Tube)

Step One

- Store tubes at room temperature.
- Label tubes with pre-printed subject labels prior to blood draw.
- Label cryovial tubes with preprinted labels.
- Pre-chill cryovials on wet ice for 5 minutes or longer.

Step Two

- Collect blood in Plasma Tube allowing blood to flow for 10 seconds and ensuring blood flow has stopped.

Step Three

- Immediately after blood draw, invert tubes 8-10 times to mix samples.

Step Four

- Within 30 minutes of blood draw, centrifuge samples at 1500 x g for 15 minutes at 4°C.

Step Five

- Aliquot 1.0 ml into each cryovial tube.
- Store plasma aliquots at -80°C until shipment.
- Return 6 1.0 mL aliquots to BioSEND.

Whole blood

Whole Blood (6 ml Lavender Top Tube)

Step One

- Store tube at room temperature.
- Label tube with pre-printed labels prior to blood draw.

Step Two

- Collect blood in tube, allowing blood to flow for 10 seconds and ensuring blood flow has stopped.

Step Three

- Immediately after blood draw, invert tubes three times to mix samples.

Step Four

- Transfer to -80°C freezer. Store upright and keep frozen until shipment BioSend.

LP Procedure

- ▶ 24g or 22g spinal needle provided in custom LP tray
- ▶ Prepare transfer and aliquot tubes
(NOT in LP tray but in kit)
 - ▶ **Label first!** ⚠
 - ▶ **Do NOT** pre-chill aliquot tubes

LP Procedure

- ▶ Collect first 1-2 ccs, place in cryovial
 - ▶ Send within 4 hours of collection to local lab for routine analysis (protein, cell count, glucose)
- ▶ Collect additional CSF, up to 15-20 ccs total, including the amount used for local labs, and transfer to 50 mL conical
 - ▶ Immediately mix
 - ▶ Transfer CSF to two 15 mL conical tubes
 - ▶ Spin at 2000x g for 10 minutes at ROOM TEMPERATURE
 - ▶ Immediately aliquot approx. 1.0 mL into aliquot tubes
 - ▶ Place labeled cryovials in cryobox
 - ▶ Freeze at -80°C immediately

CSF Preparation Processing

Step One

- Collect CSF into the 3 mL luer lock syringe or by gravitational pull.
- Dispense 1-2 mL in a cryovial.
- Send to local lab for testing.

Step Two

- Collect CSF into 6 mL luer lock syringe or by gravitational pull.
- Collect approved volume into 50 mL conical tube.

Step Three

- Immediately after collection, invert 50 mL conical tube 3-4 times to mix sample.

Step Four

- Transfer CSF into 2 15 mL conical tubes.
- Within 15 minutes of collection, centrifuge samples at room temperature at 2000 x g for 10 minutes.

Step Five

- Label tubes with pre-printed subject labels prior to collection.

Step Six

- Using a clean transfer pipette, transfer CSF from both 15 mL conical tubes into a 50 mL conical tube leaving the debris in the bottom.
- Mix the 50 mL conical tube gently by inverting 3-4 times.
- Aliquot 1.0 mL into 10 cryovials, Aliquot residual mL in last cryovial (for site use).
- Store CSF aliquots at -80°C until shipment.
- Return 10 1.0 mL aliquots to BioSend.

1.0
mL
X 10

CSF Preparation Processing

- Using a clean transfer pipette, transfer CSF from both 15 ml conical tubes into a 50mL conical tube leaving the debris in the bottom.
- Mix the 50 ml conical tube gently by inverting 3-4 times.
- Aliquot 1.0 ml into 10 cryovials, Aliquot residual mL in last cryovial (for site use).
- Store CSF aliquots at -80°C until shipment.
- Return 10 1.0 mL aliquots to BioSend.

Combine the CSF in two-15 ml conical tubes into a single 50 ml conical tube to ensure complete mixing and reduce possible batch effects in CSF aliquots generated from different conical tubes

Serum, Plasma and CSF Aliquots

- ▶ Fill cryovials to 1ml (bottom of ridged section)
- ▶ Over-filled vials may burst in freezer
- ▶ Ship material to BioSEND
 - ▶ 6 Serum aliquots
 - ▶ 6 Plasma aliquots
 - ▶ 10 CSF aliquots
- ▶ Do NOT send residual volumes to BioSEND

Blood Collection: Troubleshooting

Issue #1: Vacutainer tube with little/no vacuum

- ▶ Always check expiration dates before beginning blood draw and discard expired tubes
 - *Tubes expire on last day of month printed on tube*
- ▶ Store tubes at ambient temperature
 - *Extreme temps can affect vacuum*
- ▶ Keep extra vacutainer tubes from supplemental kit nearby during blood draw to replace “bad” tubes
- ▶ If frequent occurrence, report tube type and lot numbers to Indiana University

Blood Collection: Troubleshooting

Issue #2: Hemolyzed (pink/red) serum and plasma

Cause: Blood Collection Methods	Corrective Action
Improper venipuncture site	Draw from median cubital, basilic, and cephalic veins from antecubital region of arm
Prolonged tourniquet use	Tourniquet should be released after no more than 1 min, excessive fist clenching should be avoided
Not allowing alcohol to dry on skin before venipuncture	Without touching, allow the venipuncture site to air dry
Lumen of needle too close to inner wall of vein (indicated by slow blood flow)	
Use of too large/small bore needle resulting in excess force applied to blood	Avoid using too small/large needle. Needle size dependent on the subject's physical characteristics & amount of blood to be drawn. Most commonly used sizes are 19 – 23.
Pulling/pushing plunger too fast while drawing/transferring blood	Avoid drawing the syringe plunger too forcefully when collecting blood
	Ensure all blood collection assemblies are fitted securely, to avoid frothing

(http://www.bd.com/vacutainer/pdfs/techtalk/TechTalk_Jan2004_VS7167.pdf)

Blood Collection: Troubleshooting

Issue #2: Hemolyzed (pink/red) serum and plasma

Cause: Sample Processing Methods	Corrective Actions
Vigorous mixing/shaking	Gently invert blood collection tube when mixing additive with specimen, follow guidelines in Biologics Manual regarding number of times to invert each type of tube
Not allowing serum to clot for recommended time	Serum tubes without clot activator should be allowed to clot for 60 min in a vertical position
Exposure to excessive heat or cold	Keep samples at ambient temp
Prolonged contact of serum/plasma with cells	Do not store uncentrifuged samples beyond recommended time

Reference: BD's "Tech Talk" newsletter, Vol. 2, No. 2, October 2003
(http://www.bd.com/vacutainer/pdfs/techtalk/TechTalk_Jan2004_VS7167.pdf)

Ambient Sample Shipment

- ▶ 6 ml purple (EDTA) whole blood for DNA collection tube
 - ▶ Typically collected at baseline visit
- ▶ **Monday - Thursday only via FedEx Priority Overnight**
- ▶ Schedule FedEx pickup
- ▶ Email Sample Record and Shipment Notification Form including the FedEx tracking number **AHEAD OF SHIPMENT to BioSEND**

Packaging Ambient Sample

- Insert tube into the tube sleeve.
- Insert the sleeve into the canister.
- Seal the canister tightly.
- Place case label on canister.
- Wrap the canister in the enclosed bubble wrap.
- Place canister into the cardboard box.

Labeling Ambient Sample Shipments

- ▶ Apply the UN3373 label to the outside of the cardboard box.
- ▶ Place the box and a copy of the PDBP Sample Record and Shipment Notification Form in the Clinical Pak and seal the Pak.
- ▶ Complete the “From” portion of the air waybill with your name, address, and phone number.
- ▶ Apply the air waybill to the outside of the package.

Deliveries when and where you want.

Shipping Ambient Samples

- ▶ Ship the sample(s) to BioSEND on the day of collection.
- ▶ If this is not possible, hold at room temperature until shipping can be arranged.
- ▶ *Sample(s) must be received at BioSEND within 5 days of collection.*

Frozen Samples

- ▶ All other samples are shipped frozen
 - ▶ Plasma, serum, CSF, PAXgene™ and whole blood
- ▶ **Ship Monday-Wednesday Only via FedEx Priority Overnight**
- ▶ Schedule FedEx pickup
- ▶ Email Sample Record and Shipment Notification Form including FedEx tracking number **AHEAD OF SHIPMENT**

Packing and Shipping Frozen Samples

Pack bags, place upright & side-by-side

FILL dry ice to top of box

Packaging & Shipping Troubleshooting

Issue: Broken/Damaged Tubes

Cause	Preventative Action
Over filling tubes	Fill tubes to suggested volume. If any sample still remains, place in an additional tube
Improper packaging	Ensure the tubes are securely placed into the bubble wrap pouch and are placed in a separate bag from the boxed plasma, serum, and CSF.
Rough shipping conditions	Extra bubble wrap may be needed to pad blood tubes
Extreme changes in temperature (ambient→freezer; freezer→dry ice)	Wrapping the tubes in bubble wrap before freezing may help slow the cooling process

Shipping Frozen Samples

- ▶ Hold packaged samples in a -80°C freezer until pickup.
- ▶ *Samples must be received at BioSEND within 2 weeks of collection.*

Bulk Shipping

- ▶ Bulk shipping is available, with NINDS approval
 - ▶ Samples from 2+ subjects can be shipped together
- ▶ Appropriate for high volume sites

Shipping Frozen Samples

- ▶ Hold packaged samples in a -80°C freezer until pickup.
- ▶ *Samples must be received at BioSEND within 2 weeks of collection.*

Sample Shipment Notification Form

Instructions: Ship Frozen Shipments Monday- Wednesday ONLY! Ambient Shipments (purple-top EDTA tube) may be shipped Monday- Friday (preferably Monday- Thursday) provided they are received at Indiana University within five days of collection. This form must be completed for shipment of all research samples. Notify Indiana University (email preferred) and the DMR in advance of shipment using contact information below. Place a copy in the shipment box and file a copy of the completed form in the study binder. Ensure all frozen shipments are filled with dry ice.

In the table below, please indicate the date of specimen collection and number of tubes/aliquots submitted.

Completed by Submitter/Site				
Dates of Draw	Specimen Type	Number of Tubes/ Aliquots sent to BioSEND (Site fills this in)	Volume of Draw (mL) (Site does NOT need to fill in any longer)	Notation of Problems
